Professional Summary

IT graduate with a National Diploma in Information Technology, currently building practical data science experience through Melsoft Academy's Data Science Programme. Hands-on experience applying Python, SQL and machine learning to end-to-end projects, including a property price prediction model and a load shedding analysis using real South African datasets. Skilled in data cleaning, exploratory data analysis and regression modelling, and comfortable taking projects from raw data to actionable insights. Strong analytical thinking and communication skills developed through mentoring fellow students in Python.

Education

Melsoft Academy – Data Science Programme (Completion: August 2026)

- Python for data analysis, SQL, data cleaning, and visualization
- Introductory machine learning and exploratory data analysis (EDA)
- Building real-world data science projects and portfolio

ALX Africa – Professional Foundations Certificate

- Developed meta-skills: Critical Thinking, Problem-Solving, Communication, Collaboration, Leadership

Nelson Mandela University – National Diploma: Information Technology

- Programming, Databases, Networking, Systems Architecture, IT Project Management
- Developed strong problem-solving and technical foundations

Experience

Python Tutor – Melsoft Academy

- Mentor fellow students in Python programming, debugging and problem-solving.
- Review code submissions and provide constructive technical feedback to improve coding practices.
- Develop practical exercises that reinforce core programming concepts and analytical thinking.

Technical Skills

- Programming: Python, SQL
- Python Libraries: Pandas, NumPy
- Data Analysis: Data Cleaning, EDA, Data Visualisation
- Machine Learning: Regression, Model Development
- Tools: Git, GitHub, VS Code, MySQL Workbench, Excel, Streamlit

Projects

- **Property Intel** (Johannesburg Property Intelligence Engine): Developed and deployed a Streamlit web application using scikit-learn linear regression to predict Gauteng residential property prices by combining housing data with crime statistics and Gautrain proximity.
- **Load Shedding Impact Analyzer**: Designed a Python OOP pipeline (inheritance-based BaseProcessor → DataCleaner → Analyzer architecture) to process and analyze historical Eskom outage data, with file-based error logging and unit test coverage via unittest.

Core Competencies

Analytical thinking | Problem-solving | Communication | Attention to detail | Team collaboration
